

INTERNATIONAL OBSERVATORY H2 TRAINING

The international observatory of the European project “H2 training” approved by the European Union in the framework of the Leonardo da Vinci Programme is a Europe-widespread platform open to institutions, training centers, organisms and companies interested in giving value to the results obtained during the development of this international pilot project and in analysing the technical development in the market and in the renewable energy ambit and fuel cells for designing a conclusive expert qualification adapted to the development of the new emerging professional at international level.

You can formalize the participation in the international observatory through applying the entity or the company to Foundation San Valero, which is the project coordinator or through any of our international project partners. The company/entity interested should fill in an enquiry to analyse the specific qualification needs and the degree of technical development in the market in the intervention project ambit for prospection ends.

The entity applying for its adhesion to the international observatory will provide its corporate image and the electronic address of the contact person. The logotype and contact e-mail address will be upload to our Web project space (www.h2training.eu) being guaranteed the current applicable data protection legislation.

The participation in the observatory implies:

- . • Permanent collaboration of expert entities and experiences exchange in the ambit of the objectives persecuted by the project.
- . • Access to the technical material elaborated.
- . • Participation in expert forums organised in the project framework aimed at strengthening the project visibility and its results.
 - Priority of access to the qualification programmed at national level and international for both face-to-face modality and e-learning.
- . • Participation accreditation in the project through diploma issued by the international partnership supporting the collaboration of the participating entity/company on the occasion of the final dissemination event of results.
- . • Valorisation of the results obtained in the project for their sustainability beyond the vigeny of the pilot actions.
- . • Inclusion of the participating entities logotypes, corporate images in the different dissemination materials carried out and publications foreseen in different languages.
- . • Bilateral or multi-lateral collaboration agreed expressely and individually between the projects partners integrating the partnership for developing future actions of innovation at national level or European and of common interest.
- . • Technical assistance, specifically agreed and individually between the members of the observatory and/or project partners for collaborating in mutual interest ambits.
- . • Dissemination of the observatory, the actions programmed and the “h2 training” project results in their respective ambits, fairs, congresses, networks and specific dissemination products of every entity is participating or promoting.
- . • Mutual “linking” to the project Web site and the institutional Web site of every entity participating in the observatory, except for those entities having expressed their disagreement by written to the permanent project secretariat.

The Project Management or any of the “H2 training” International Observatory members can take the initiative on defining different collaboration degrees depending on the partner’s / entity’s nature, activity ambit and valorisation strategies of results in order to strength the project objectives and the sustainability of the actions beyond the project vigeny in 2008 year, such collaboration should be expressed by written in a specific “collaboration agreement” signed by the interested parts.
